

REQUEST FOR ADDITIONAL FUNDING

Department: Police CID/ 62355	Fund No.:	FY Year: 21-22	Priority
-----------------------------------------	------------------	--------------------------	-----------------

Type:
 New Program Supplemental Request

Description: Thomas Reuters/ Clear, Vigilant

Justification: Previously the Knoxville Police Department subscribed to Accurant/Lexus/Nexus and TLO databases in order to assist in locating potential suspect involved in criminal activity. However, these systems provided data that was dated and sometimes inaccurate. Subsequently, KPD has subscribed to Thomas Reuters, Clear/Vigilant Solutions. There are many more opportunities to track criminal activity by the use of Clear/Vigilant Solutions.

Facial recognition software, tag readers, and real time booking photographs are just a few of the components that are available to investigators/officers. The booking photographs are used daily by investigators in order to prepare photo arrays. The tag readers, both private and law enforcement, are located throughout Knoxville, Knox County and are beneficial in locating areas that known suspect vehicles have traveled. Additionally, this provides much needed intelligence in order to thwart criminal activity. Facial recognition is essential in today's digital world. Technology has quickly advanced in recent years. The cost of video surveillance cameras have decreased and most retailers have cameras in their businesses. The ease of use of the facial recognition portion is remarkable. Numerous suspects have been identified and crimes have been solved by the use of Clear/Vigilant Solutions in recent months.
